

React Native

Note: this tutorial is for **Windows** not for IOS.

How to get started ?

You need to install:

- NodeJS
- Visual Studio Code
- Android Studio (Optional if you are using your phone)
- Expo Client on your device (Optional if you are using the emulator)

How to create a quick project ?

Apply those cmd lines:

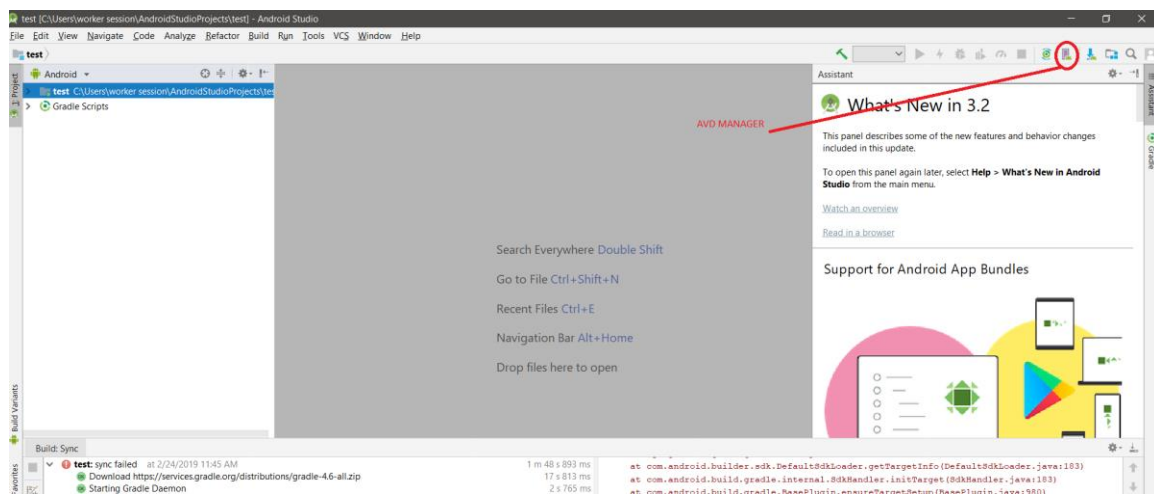

- expo init -g expo-cli
- expo init projectName
- cd projectName
- expo start or npm start

How to use expo on your device ?

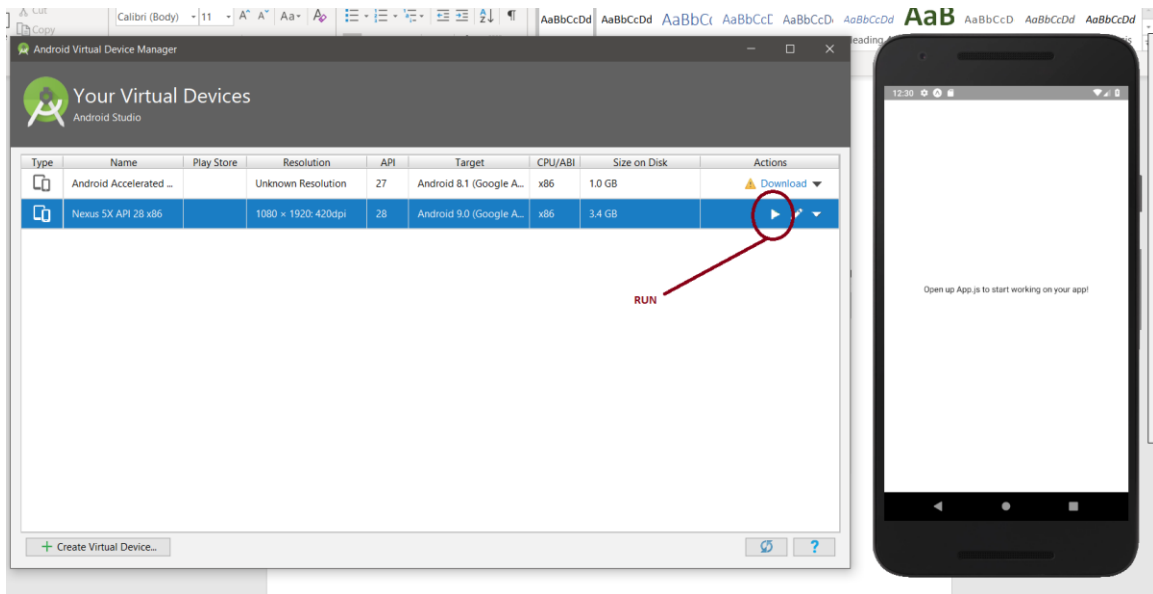

If you are **working on someone project** which required permissions, you need to create an **Expo account**. Otherwise, you only scan your QR code with the **Expo Scanner Tool on device**.

How to use the Android emulator ?

You need to install some AVD (Android Virtual Device) if you don't have already installed. The IDE picture can be obsolete.

The next step,

And the last step,
